

Sean Paul S. Lapasanda

Full Stack Developer

seanpaullapasanda@gmail.com | Davao City, Philippines | ichiharashii.dev | linkedin.com/in/seanpaul-lapasanda

PROFESSIONAL SUMMARY

Junior Full Stack Developer with hands-on professional, academic, and personal experience building web applications and business systems. Experienced in frontend and backend development, database management, REST API integration, and modern web technologies using React, Laravel, PHP, TypeScript, and SQL. Adaptable and eager to learn new technologies, with a strong problem-solving mindset and a focus on building clean, maintainable solutions to real-world problems.

TECHNICAL SKILLS

Frontend: React, TypeScript, HTML5, Tailwind CSS, Next.js, Nuxt.js, Vue.js
Backend: Laravel, Fast API, PHP, Python, REST APIs, Node.js, PostgreSQL, MySQL, Convex
Mobile: React Native, Expo, Expo Router
Dev Tools: Git, GitHub, GitLab, VS Code
Cloud & DevOps: Vercel, Railway, Amazon S3, Docker, Cloudflare

PROFESSIONAL EXPERIENCE

Full Stack Developer (Project-Based), EBOS SG PTE LTD

06/2026 – 07/2026

Enterprise recruitment CRM automating candidate workflows and outreach using [Laravel](#), [Vue.js](#), and [MySQL](#).

- Integrated 6+ third-party messaging APIs and protocols (Google Gmail SDK, Microsoft Graph, Meta Messenger/Instagram, LINE, Telegram MadelineProto, and Unipile) to centralize multi-platform candidate outreach into a single CRM inbox.
- Built a centralized OAuth 2.0 authentication workflow with automated token refresh, delegated permission scopes, and global callback routing across multiple mailboxes and organizational accounts.
- Implemented asynchronous webhook listeners and queue workers in Laravel to capture real-time inbound messages, resolve cross-platform candidate identities (LINE userId, Meta Page-scoped IDs), and process attachments in the background.

Full Stack Developer Intern, F.M. Morata Customs Brokerage & Law Firm

02/2026 – 05/2026

Customs brokerage and legal operations platform built with [Laravel](#), [React](#), and [MySQL](#).

- Led the full-stack development of MorataFMS, an internal operations platform for customs brokerage and legal workflows, streamlining end-to-end import/export shipment tracking, document review gates, and cross-department collaboration.
- Integrated OnlyOffice Document Server into the legal workspace, enabling automated template rendering, dynamic variable injection, and in-browser collaborative editing for legal contracts and notarial certificates.
- Implemented asynchronous background queue jobs and AWS S3 integration to handle bulk document processing and multi-file ZIP archive exports, eliminating HTTP request timeouts during heavy legacy data downloads.

Crew Trainer, Golden Arches Development Corporation

09/2022 – 04/2026

Part-time role balancing academic responsibilities: customer service, food and beverage preparation, and crew training.

- Prepared food products per company procedures, quality, and safety standards while maintaining cleanliness and sanitation.
- Trained and guided new crew members and managers on station procedures, kitchen operations, and quality standards.
- Maintained cleanliness, organization, sanitation, and proper food handling in assigned production areas.

PROJECTS

Fukurou: Automated Schedule Import & Shift Management Platform

Personal Project

[React Native](#) · [TypeScript](#) · [FastAPI](#) · [PostgreSQL](#)

Turns messy shift rosters, class timetables, and spreadsheets into organized, verified calendar entries.

- Built a mobile platform converting screenshots, photos, PDFs, CSV, and Excel schedules into calendar entries in under 2 minutes, covering 5 user niches (shift workers, students, teachers, OJT, multi-job) from a single codebase.
- Built native on-device OCR (iOS: Swift/Apple Vision; Android: Kotlin/Google ML Kit) for offline, sub-second extraction, paired with a server-side PaddleOCR/pandas pipeline; added a human-in-the-loop review layer that scores confidence and flags invalid data.
- Implemented secure REST APIs with JWT authentication, refresh token rotation, and rate limiting; built a home-screen widget for real-time schedule tracking without opening the app.

eMediCard: Digital Health Card Management Platform

Capstone Project

[React Native \(Expo\)](#) · [Next.js 15](#) · [Convex](#) · [TypeScript](#) · [Turborepo](#)

Modernizes healthcare permit processing, payment integration, document verification, and QR card issuance for Davao City.

- Built a Turborepo monorepo housing an Expo (React Native) mobile application alongside a Next.js 15 admin dashboard, consuming a unified backend workspace package for end-to-end type safety.
- Developed a real-time serverless backend using Convex, implementing reactive queries and transactional mutations to synchronize multi-stage permit approvals (document upload, clinic validation, and status updates) with zero polling overhead.
- Integrated the Maya (PayMaya) checkout API and webhook handlers for automated payment reconciliation, paired with dynamic digital QR health card generation linked to a public anti-fraud verification portal.

EDUCATION

Bachelor of Science in Information Technology, STI College Davao

2022 – 2026

LANGUAGES

English, Filipino
